DESCRIPTION GASOLINE FINDER

GASOLINE FINDER is a product which turns from grey colour to red when in contact with gasoline, petrol, light mineral oils, etc.

INSTRUCTIONS

A small quantity of **GASOLINE FINDER** is spread on a gauge or measuring tape.

When the measuring instrument has been in contact with petrol etc., the colour of the **GASOLINE FINDER** will have turned to red, so that the level can be easily and exactly be determined.

DESCRIPTION WATER FINDER

For determining water presence under gasoline, petrol and light mineral oils.

WATER FINDER is a product which shows the presence of water under gasoline, petrol and light mineral oil turning from grey colour to red.

APPLICATION

WATER FINDER is an indispensable aid in measuring the amount of water which may be present under petrol or light mineral oils.

It is therefore important for stock control and checking deliveries.

Since water is the cause of corrosion in storage tanks, which may be used, for example, for central heating installations, a check on the presence of water is extremely important.

The leaks caused by such corrosion can entail enormous costs, for which the owner of the tank is responsible.

Water is formed by condensation or is mixed with the oil when loaded.

INSTRUCTIONS

Spread the paste on the bottom of the dip stick or sounding tape and take the sounding as usual.

When withdrawing the sounding tape, the water level can be read directly where the dark red colour starts.
